Methods

Table S1. Definitions of COVID-19 cases

Clinical severity	Definition
Mild	Patients with mild clinical symptoms, and no pneumonia manifestation in imaging.
Moderate	Patients with fever, respiratory symptoms, and pneumonia manifestation in imaging.
Severe	<p>The adult patients meet any of the following:</p> <ul style="list-style-type: none">a. respiratory distress, breathing rate ≥ 30 beats/min; orb. the oxygen saturation $\leq 93\%$ at a rest state; orc. $PaO_2/FiO_2 \leq 300$ mmHg (1 mmHg = 0.133 kPa); ord. patients with $>50\%$ lesions progression within 24~48 hours. <p>The child patients meet any of the following:</p> <ul style="list-style-type: none">a. high fever that lasts more than 3 days; orb. respiratory distress (breathing rate ≥ 60 beats/min in children under 2 months old; ≥ 50 beats/min in children aged 2-12 months old; ≥ 40 beats/min in children aged 1-5 years old; ≥ 30 beats/min in children over 5 years old); orc. the oxygen saturation $\leq 93\%$ at a rest state; ord. assisted breathing (flaring of nose wings, three-concave sign); ore. lethargy, convulsions; orf. children with feeding difficulty or refuse to be feed and with dehydration.
Critical	<p>Patients meet any of the following:</p> <ul style="list-style-type: none">a. respiratory failure occurs and mechanical ventilation is required; <p>or</p> <ul style="list-style-type: none">b. shock occurs; orc. complicated with other organ failures that requires monitoring and treatment in ICU.

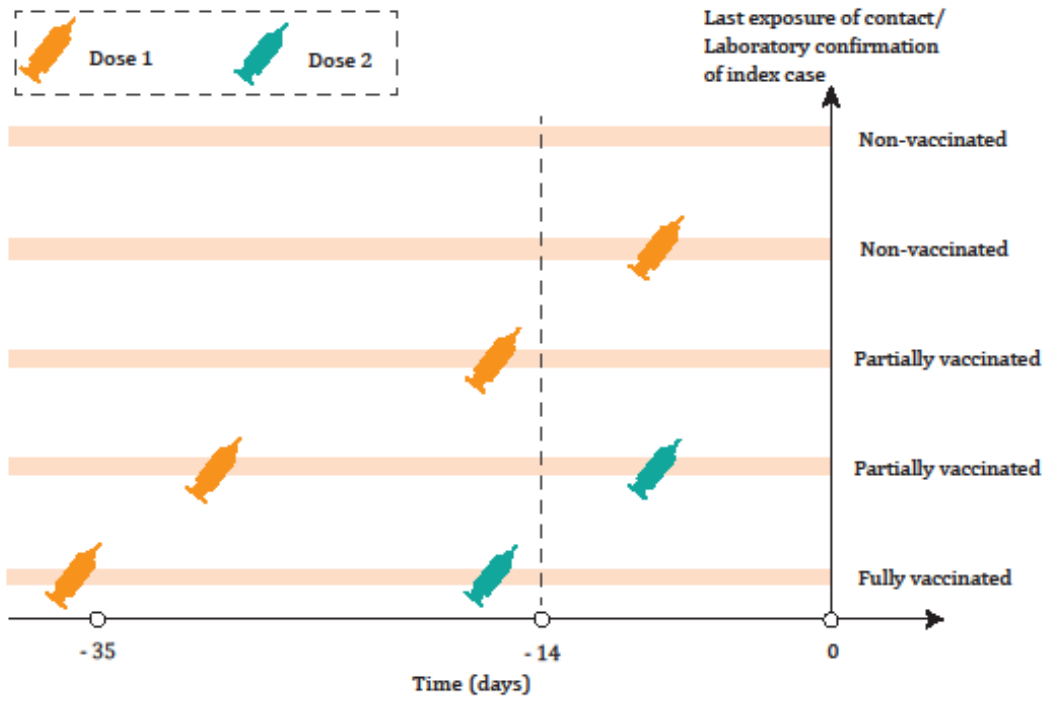

Figure S1. The definition of vaccination status of close contacts and index cases

Sensitive analyses

Mixed-effect logistic regression models were used to estimate the effectiveness of inactivated vaccines and cluster index was introduced in the model as random effect. To evaluate robustness of the model, we randomly selected one index case for close contacts with multiple exposures, which was repeated for 1000 times. Here we listed results for 5 samplings.

Table S2. Adjusted effectiveness of inactivated vaccines in preventing different COVID-19 outcomes, according to vaccination status, by randomly selecting different index case of close contacts with multiple exposure.

Outcome and vaccination status	Model 1	Model 2	Model 3	Model 4	Model 5
SARS-CoV-2 infection					
Non-vaccinated	Ref	Ref	Ref	Ref	Ref
Partially vaccinated	-0.9 (-119, 53.5)	-30 (-180.5, 39.8)	-18.9 (-160.3, 45.7)	-15.2 (-148.4, 46.6)	-25.9 (-172.7, 41.9)
Fully vaccinated	47.8 (-6.1, 74.3)	43 (-16.8, 72.2)	45.8 (-12.3, 73.9)	46 (-10.7, 73.6)	43.6 (-16.1, 72.6)
Symptomatic COVID-19					
Non-vaccinated	Ref	Ref	Ref	Ref	Ref
Partially vaccinated	-5.3 (-131, 52)	-16.6 (-155.8, 46.8)	-26.4 (-172.6, 41.4)	-2 (-119.9, 52.7)	-20.5 (-159.9, 44.1)
Fully vaccinated	50.1 (-1.5, 75.4)	51.7 (1.6, 76.3)	50.3 (-1.9, 75.7)	52.2 (3.8, 76.3)	49.8 (-3.3, 75.6)
Mild COVID-19
